

## The new alternative to cutting pipes and mechanical meters from Micronics, for simple, low cost flow measurement from outside the pipe!

The U1000 is a cost engineered permanent/fixed clamp-on flow metering solution for measuring preset flow rate – l/m with a volume pulse output in litres and an optional rate signal, which can be used as a stand alone meter or as an integral part of an aM&T or BEM's system.

**Simple to install** – clamp-on to the pipe, connect power and enter the pipe diameter, no specialist skills or tools required!

A cost effective alternative to traditional in-line meter installation, plus dry servicing, providing minimum downtime and maximum availability!

Compact, rugged and reliable, the U1000 has been designed to provide sustained performance in industrial environments.

- Metered liquid flow rate and volume
- Easy to install
- Clamp-on sensors
- No programming
- Lower installed cost than in-line meters

## INDUSTRIES:

- Building Services
- Energy Management
- Water Treatment
- Chemical
- Pharmaceutical
- Petrochemical
- Food

## RECOMMENDED FOR:

- Hot water < 85°C
- Chilled water
- Potable water
- Demineralised water

## APPLICATION/USE:

- Hot water metering and flow measurement
- Flow measurement for Heat Metering
- Chilled water metering and flow measurement
- Flow measurement for chilled water energy metering
- Potable water metering and flow measurement
- Process water metering and flow measurement
- Ultrapure water measurement

### U1000 - Permanent Ultrasonic Liquid Flow Meter

### U1000 Specification

**Accuracy:** +/-1-3% of flow reading for >0.5m/s

**Flow Velocity Range:** 0.05 to 10m/s, bidirectional

**Pipe Range:** 50-150mm Nominal Bore

**Water Temp: Range:** 0°C to 85°C

**Flow Rate Output:** Optional opto Isolated 4-20mA

**Volume Output:** Pulse

Outputs preset to default condition based on Pipe Nominal Bore

**External Power supply:** 12V-24V +/- 10% AC/DC at 7 watts

**Electronics enclosure:** IP54

**Input/Output Cable:** 3m x 6 core for power in and data out

## U1000 - Permanent Ultrasonic Liquid Flow Meter

**U1000 Flow Reading Screen**

### U1000 Product Features and benefits

- Factory configured for pipe size – minimal site configuration
- Simplified guide rail & sensor assembly – simple installation
- Clamp-on – noninvasive & low install cost
- LCD with backlight – install & service information
- Integral pulse or 4-20mA outputs – aM&T & BEM's compatible

### Simple steps for locating U1000 on pipe

Guide rail and sensor assembly showing grease with protective shipping packing removed

Clamp guide rail and sensor assembly to pipe and release sensor locking screws

Connect power and sensors to electronic assembly

Click electronic assembly onto guide rail and sensor assembly

### HOW DOES IT WORK?

The Ultraflo is a transit time ultrasonic flow meter designed to work with clamp-on transducers, to provide accurate measurement of liquid flowing within a closed pipe, without the need for any mechanical parts to be inserted through the pipe wall or to protrude into the flow system. It takes just a few minutes to install and there is no need to shut down flow or drain the system!

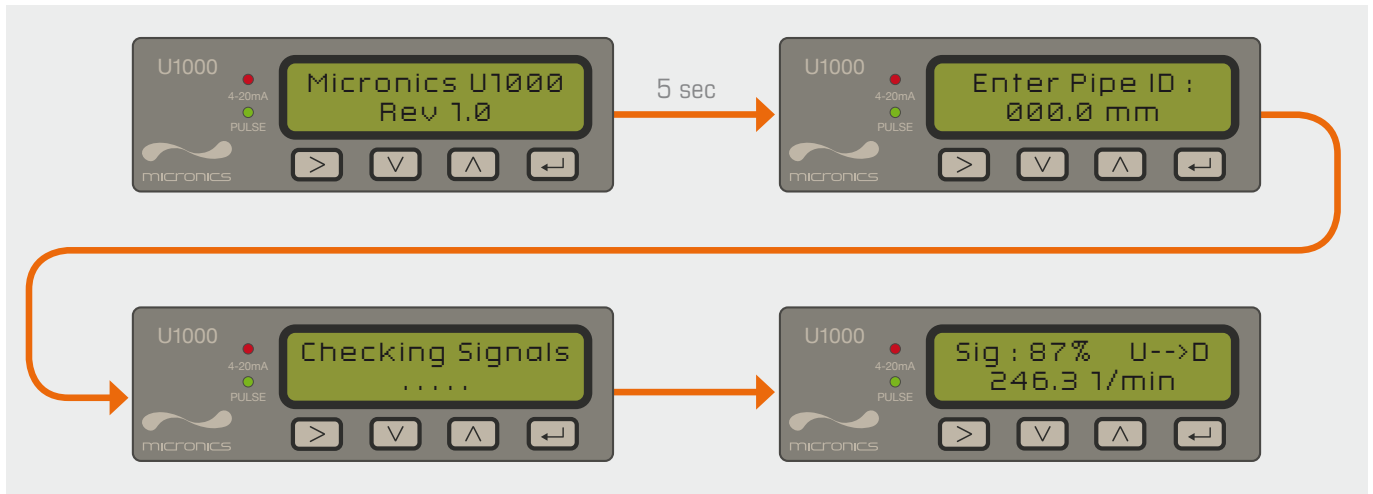

When ultrasound is transmitted between the transducers, the speed at which the sound travels through the liquid is accelerated slightly by the velocity of the liquid through the pipe. When ultrasound is transmitted in the opposite direction, the flow of the liquid causes the transmitted sound to decelerate. The subsequent time difference is directly proportional to the flow velocity in the pipe. Having measured the flow velocity and knowing the pipe cross-sectional area, the volumetric flow can be easily calculated.
